EXPERIENCE

J.P. MORGAN CHASE & CO

Quantitative Research Associate - Global Credit and Commodities Group

New York, NY

2006 - 2008

- Led a team to construct and test 3 independent models to price and risk-manage natural gas storage contracts, enabling the trading desk to win and manage new contracts of over \$300 million.
- Analyzed requirements and collaborated with traders to map out processes and tools for a new risk management system supporting energy and foreign exchange derivatives trading.
- Created tools and infrastructure to dynamically generate over 20 risk reports based on real-time trade/market data.
- Developed market and instrument representations for North American power markets, allowing power trading volume to increase by over 100% each month.
- Managed development of commodity index trading applications for Dow Jones and Goldman Sachs commodity indices, supporting over 100 external clients.
- Assisted with recruitment efforts and interviews and provided mentoring for new technology hires.

Foundational Components Analyst

2003 - 2006

- Developed and maintained a suite of support tools (monitoring, inventory tracking, etc.) for the largest parallel computing grid on Wall Street (over 10,000 servers), allowing a target uptime of 99.9%.
- Managed integration efforts and timelines for grid-computing initiatives across multiple lines of business for over 15 internal clients.
- Collaborated in the development of business process management tools and associated services for deployment across multiple lines of business within the bank.
- Assisted with successful implementation of "Single Sign-On" initiative to over 50 internal clients across the firm.
- Promoted to Associate within 15 months of service, compared to program average of 2-2.5 years.
- Awarded Distinguished Employee Service Award for outstanding project leadership; received Employee Service Star award for excellence in dedication and performance.

ATLANTA ALLERGY

Technical Consultant

Atlanta, GA

2002 - 2003

- Collaborated with staff to gather requirements, build, and support a tool to store patient information and provide recipes for constructing vials of allergy extracts; tool is still in use today.
- Coordinated distribution of multiple versions of software package concurrently with academic studies.
