

Torch – Heuristic Evaluation

1. Good: Map feature is very helpful in giving spatial dimension. (Match the real world & Recognition, not recall)

2. Minor: Not totally clear that the tours are including landmarks, not at landmarks. (Help & documentation)

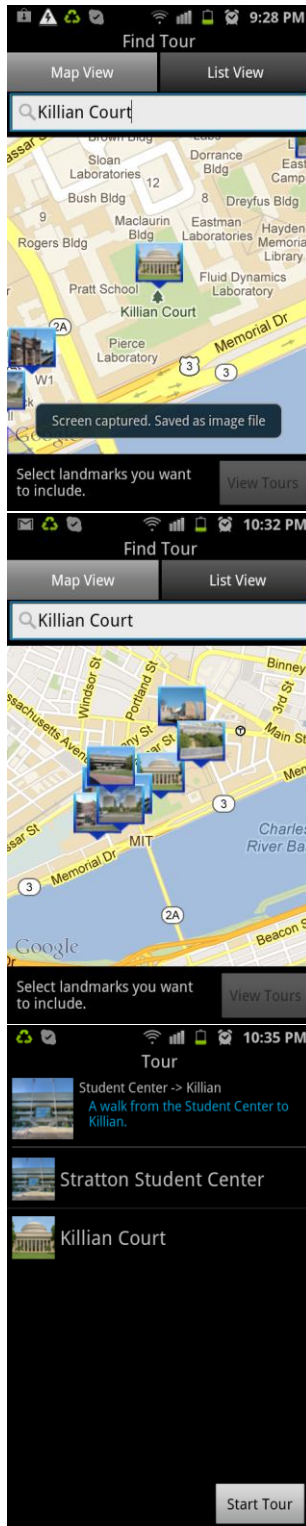

3. Major: Street view images of landmark often block name of landmark. Unhelpful if landmark is unfamiliar. (User control & Freedom)

4. Major: Street view images of landmark often overlap each other. (Error prevention)

5. Major: List View's functionality is unclear. My assumption is that it'll show all the landmarks in view, not all the ones that have been selected. (Help & Documentation)

6. Major: Can't add new landmarks from List View. (User control & freedom)

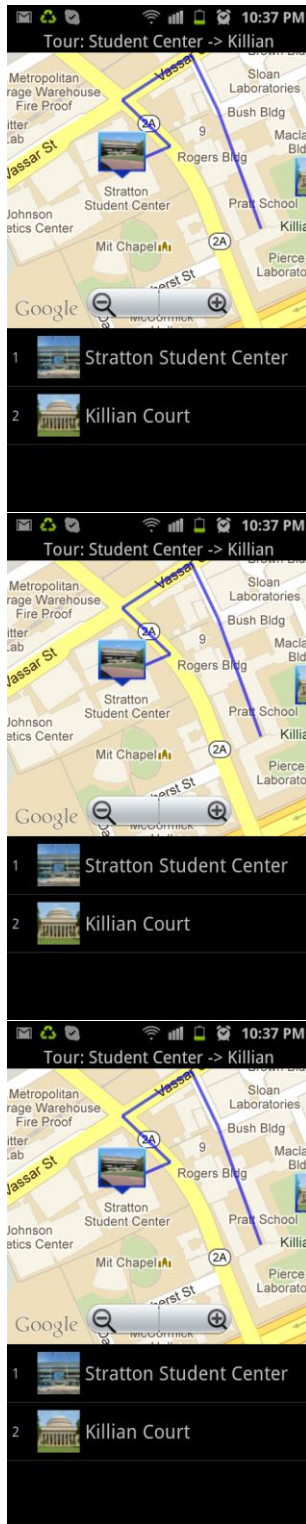

7. Minor: Search feature doesn't select the landmark. (Flexibility & Efficiency)
8. Major: Search feature centers the map on the landmark, regardless of the zoom setting on the map. (Error prevention)
9. Cosmetic: When a tour is selected, the layout and highlighting makes it appear like clicking on a landmark will show more information or do something. (Consistency & standards)

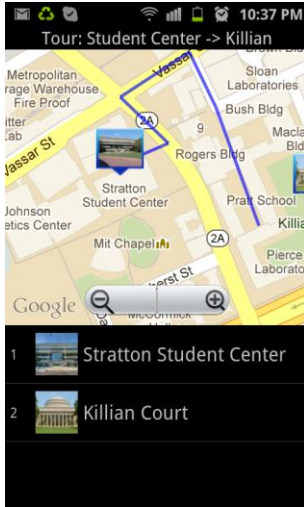

10. Major: When a tour is in progress, landmarks are not labeled with what number they are in the tour. (Flexibility & Efficiency)

11. Cosmetic: The tour line could indicate which direction along the line the tour is intended to go. (Help & documentation)

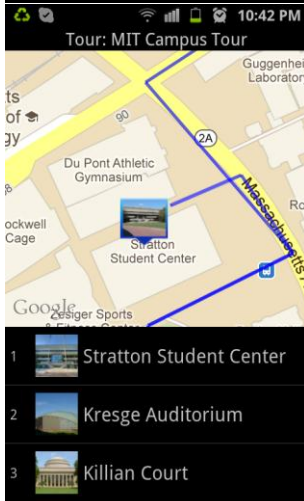

12. Minor: In tour view, selecting landmarks in the list doesn't center the landmark on the map, even though it seems to be expected behavior. (Consistency & standards)

13. Major: The landmark pictures in the list and on the map are not the same. (Consistency & standards)

14. Major: Reordering the tour in create tour is a non-obvious feature, and limiting it only to the left side makes it difficult to use. (Help & documentation)

15. Minor: Landmarks can't be removed from the list. (Flexibility & Efficiency)
