

➤ Good:

- Mistakes are easy to undo, everything I put in I can take out, also I assume undo/redo will work soon (safety)
- All actions are clearly labeled, everything is intuitive (Learnability)
- If you're editing a textbox it gets a dotted border around it, good affordance (Learnability)
- I like that everything I want to do is readily accessible in the side bar (Efficiency)

➤ Bad:

- The first time I made a new image the picture was stretched horizontally and squashed vertically (sorry I didn't get a screenshot of it)
  - ◆ Heuristic: aesthetics
  - ◆ severity: major
- it's possible to be scrolled down and for new things to be inserted at the top, and I don't realize that things are being inserted so I keep inserting, bad feedback
  - ◆ Heuristic: Visibility of system status
  - ◆ severity: major
- I thought that pushing B/I would effect the entire textbox, it didn't take me long to figure it out that I needed to highlight, but it was initially confusing
  - ◆ Heuristic: consistency
  - ◆ severity: minor
- If image A is on top of image B and I hover over image B, an x appears on the top left corner of image B and I can see it through image A, when I move my mouse from image B to A the x disappears, so the x suggests I can delete B, but I actually can't until I move A from on top of it
  - ◆ Heuristic: consistency
  - ◆ severity: major

- I can erase the drag to reorder label (also, when I completely erase the labels I can't delete the text box that it belonged to)
  - ◆ Heuristic: error prevention
  - ◆ severity: major

- The B/I buttons don't have good "button affordance", although its fairly obvious that they are clickable
  - ◆ Heuristic: affordability
  - ◆ severity: minor
- Once text is made bold/italicized, the button is pressed down, but if you click elsewhere (so they dissappear) and then click back the button is no longer depressed, furthermore when you un-bold/un-italicize the button gets pressed down again
  - ◆ Heuristic: internal consistency
  - ◆ severity: minor
- When I hover my mouse over the "drag to reorder" label my mouse gives the affordance for being able to drag up and down, but not left to right
  - ◆ Heuristic: affordance
  - ◆ severity: minor
