Subject: AntiVirus Project - Notes from 10/26/12 Meeting

Date: Monday, November 5, 2012 2:32:43 PM Eastern Standard Time

From: Sophie C Wong

To: Timothy J McGovern, Andrew Munchbach

Hi Tim and Andrew,

I apologize for the delay, but below are my notes from our meeting last week on the new AntiVirus Software project. I have **not** created a project wiki site yet, as we probably want to give this project an **official** project name. We can discuss more Wednesday when we meet.

Please let me know if there are any edits or corrections to my notes below. I look forward to our meeting Wednesday to start.

MIT AntiVirus Project Initial Project Review meeting Friday, October 26, 2012

Attendees: Tim McGovern, Andrew Munchbach, Sophie Wong Goal of meeting is to review at high level, the project request

- · Currently MIT IS&T offers McAfee Antivirus software to both standalone users and in domain windows users to Staff, Students, and Faculties
- There is a desire to replace McAfee Antivirus software because of lack of sub-par support structure, and McAfee's heavy emphasis on managed environments.
- · Because all MIT's endpoints are not completely managed, we have no central reporting today.
- · Currently MIT pays approx. \$40k for license and support for approx. 5k licenses
- Ideally we would like to offer a new antivirus software to as a minimum, the standalone users by July 1st, 2013, which is when the MacAfee license is up for renewal.
- Strategy for implementation would be that we offer new AntiVirus software, let users change to new software when they are ready, or as they get a new imaged machine. To not mandate a mass change.
- Implementation strategy should include communication/awareness, selection and evaluation, testing, documentation, and deployment
- Criteria for new software should be that it must be able to work in a windows in-domain environment also. Need to check if this is a nice to have or mandatory to have.
- · This is an approved project
- Funding for this project will come from savings from the current MacAfee contract. Any minor surplus cost as a result of this project may mostly like be absorbed

Action Items:

- · Sophie to schedule meeting to begin officially begin project
- Andrew/Tim will talk to Mark/Richard regarding whether the vision is to have ONE product for BOTH standalone AND in-domain; or TWO products.
