

Task	Image	Problem/Positive Feature Description	Usability Heuristic	Severity
Playing a Song		<p>The play icon stays at the green play symbol after it is clicked, and it is not apparent how to stop the song.</p> <p>This is a catastrophic safety issue, because the user may accidentally click the red record button to pause the song (since red has an external consistency for "stop"). The user may record something unknowingly. <i>Possible Solution: Change the image to a Pause icon after Play has been clicked.</i></p>	Safety and Learnability	Catastrophic
Recording a Song		<p>The icon doesn't change to indicate how to stop the recording. There should be a way to pause and/or stop the recording, which should match external consistencies by using the Pause or Stop icons. The user may also confuse the recording buttons with the play-song buttons. <i>Possible Solution: Change image to a Stop or Pause icon (a black square) after recording has started.</i></p>	Safety and Efficiency	Catastrophic
Recording and Playing a Song		<p>Because they are grouped together and can both be pressed at once, it is confusing whether one can play and record a song at the same time, and how that would work.</p>	Safety and Learnability	Catastrophic
Changing Tempo	<p>Tempo</p> <p>Playback <input type="text" value="20"/></p> 	<p>It is not apparent whether this also manipulates the recording playback, because the user can only play the recording by visiting the separate Recording panel.</p>	Learnability	Major
Using the Metronome	<p>Metronome <input type="text" value="20"/></p> 	<p>It is confusing when this starts playing and stops - how can you pause the metronome?</p>	Learnability	Major

Controlling the Volume	 <p>The screenshot shows two volume sliders. The top slider is labeled 'My Voice Part' and has a value of 20. The bottom slider is labeled 'Other Voice Parts' and also has a value of 20. Both sliders are blue and have a white knob.</p>	It is not apparent whether this controls the playing song or the recording.	Safety and Learnability	Major
Leaving a Comment	 <p>The screenshot shows a 'Comments' section. A comment by 'Ben' says 'Anna sounds great!' with a date of '4/16'. Below it is a dropdown menu titled 'Select a recording to comment on:' with options: 'General Comment', 'Anna - First Try', 'Anna - Second Try', 'Anna - Best one! ...I think?' (highlighted), and 'Ben Recording 1'.</p>	It will be inefficient to scroll through and find a specific recording to comment on when there are several recordings.	Efficiency	Major
Finding a Recording	 <p>The screenshot shows two sections: 'My Recordings' and 'Recordings by Others'. 'My Recordings' lists three items: 'Anna - First Try' (4/01), 'Anna - Second Try' (4/14), and 'Anna - Best one! ...I think?' (4/16). 'Recordings by Others' lists one item: 'Ben Recording 1' (4/16). Each item has a play button icon.</p>	There will be many recordings by other singers, and it will be inefficient to scroll through everyone's.	Efficiency	Major
Updating Profile	<none>	There is no way to update information on one's profile, or if there is, it's not apparent.	Learnability	Major

<p>Finding the About Tab</p>		<p>The About tab is not in an externally consistent location. It is grouped with "Inbox" and "Profile", which are specific to the logged in user. About, however, talks about the whole program. <i>Possible solution: Group Log Out and About together, or place About in the main menu alongside Home, Songs, and People.</i></p>	<p>Learnability</p>	<p>Minor</p>
<p>Pressing Back Button on Profile</p>		<p>No matter where the user comes from, the back button takes you back to the People Directory. For example, if you are on the About page and go to Profile, the back goes to the People Directory instead of About.</p>	<p>Learnability</p>	<p>Minor</p>
<p>Monitoring Availabilities</p>		<p>It would be more useful to have a way to compare people's availabilities.</p>	<p>Efficiency</p>	<p>Minor</p>

<p>Finding a Person</p>		<p>Right now, there is no way to sort people and view them in a certain order. Searching for someone in over 20 members will be difficult. <i>Possible Solution: Have a dropdown menu that allows filters/sorting by ascending order, voice part, etc...</i></p>	<p>Efficiency</p>	<p>Minor</p>
<p>Returning from Song Play/Record Page</p>		<p>The back button may be in an inconsistent place, centered on the screen.</p>	<p>Learnability</p>	<p>Cosmetic</p>
<p>Looking at Events</p>		<p>The layout of Upcoming Events looks clean, but the timeline might not be apparent. <i>Possible Solution: Have a calendar view as well as this list. The calendar view will make the timeline inherently visible.</i></p>	<p>Efficiency</p>	<p>Cosmetic</p>

<p>Reading Music Score</p>		<p>I like how the music score is to the right and manipulations and comments take place on the left.</p>	<p>Layout</p>	<p>Good</p>
<p>Checking Newsfeed</p>		<p>The layout of the comment newsfeed is nice, with efficient links.</p>	<p>Layout</p>	<p>Good</p>
<p>Look-and-Feel</p>	<p><none></p>	<p>Overall look-and-feel of the icons are nice and cozy. The blue theme and saturations are pleasant.</p>	<p>Graphic Design</p>	<p>Good</p>
<p>In General</p>	<p><none></p>	<p>In general, nice use of whitespace. Overall, the layout is comfortable to look at and search through.</p>	<p>Graphic Design</p>	<p>Good</p>
