**CoShare** – Prototype evaluation

1. Good - Buttons for select de-select all. Increases **efficiency**.
2. Cosmetic – Does not select the video.

3. Good – Video plays right there. Doesn't not block the user in any way or wait for a new page load.

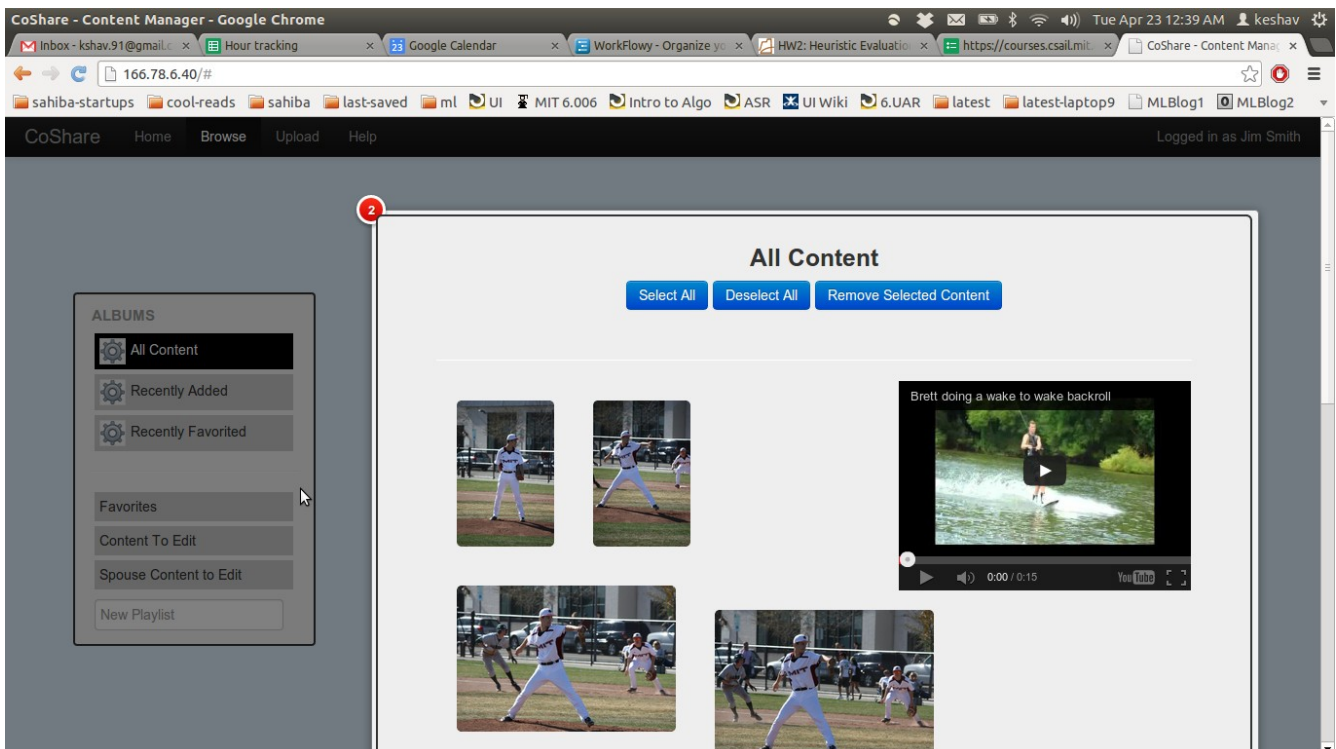

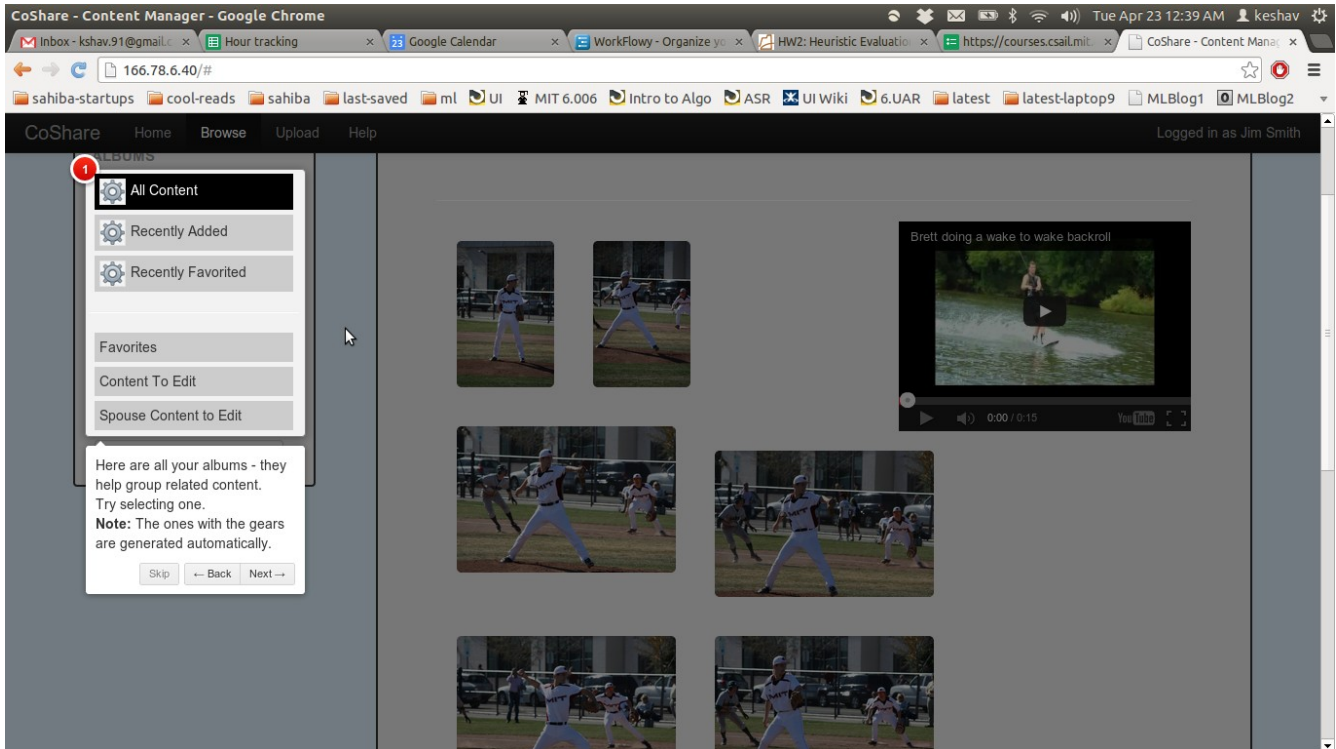

4. Major – Names of the children could be links, allowing to filter by the pictures of that particular child only.
5. Major – Would be better if "**Recently added**" would be a link rather than "**See all**". Makes the page more **scan-able**, removes unnecessary elements.
6. Major - **See all** link doesn't work. Links to home instead of the playlist.

Help

7. Good – Slick help tutorial.
8. Major – For the second step of help, (below picture), the help message is out of the screen, i.e. one needs to scroll to read it.
9. Minor – Clicking next on the second help message doesn't show up any more help messages. It should read "**Close"** instead of "**Next**".
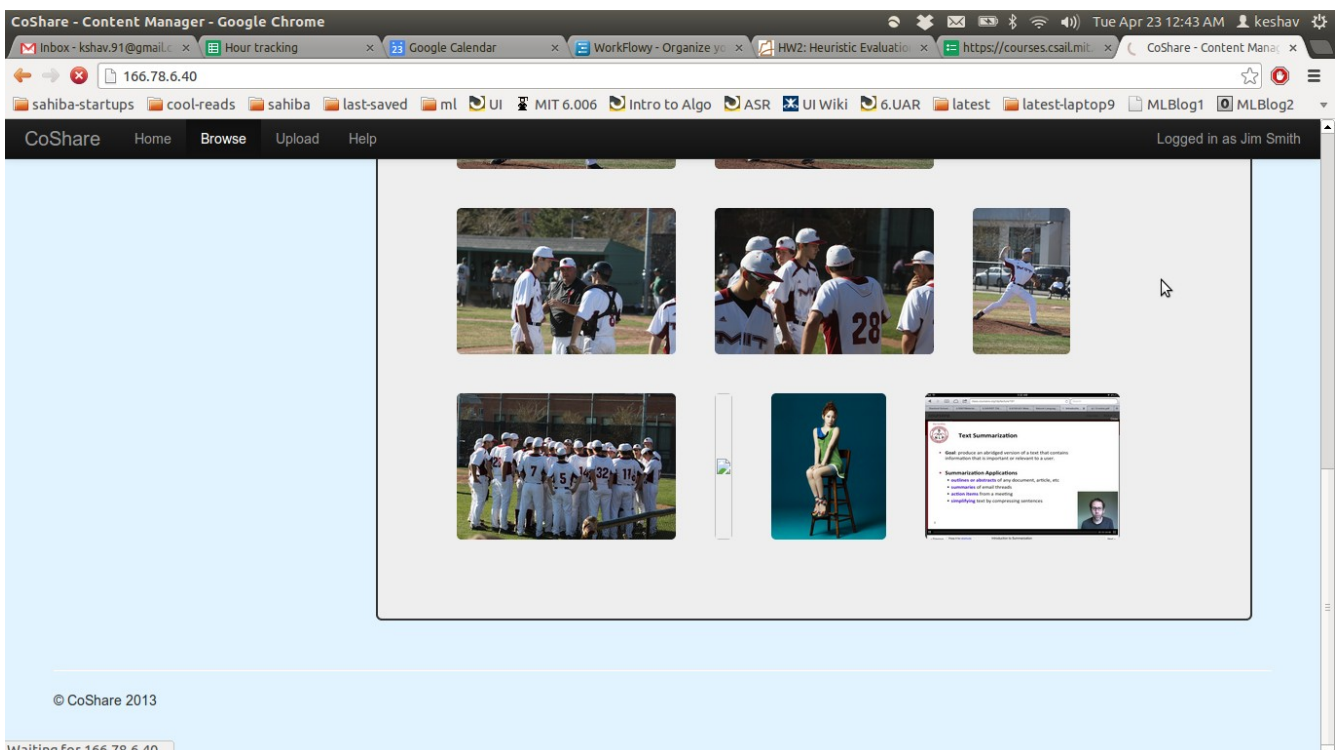

**Playlists and drag & drop**

10. Good – **Nice feedback during drag and drop**. Red marker with a count follows the mouse. The list to which the pictures will get added get highlighted in green. Adds **safety** by interactive showing what is going to happen.

11. Major – Having **counts next to playlists** is very common, letting people know how many things they have in any particular playlist.
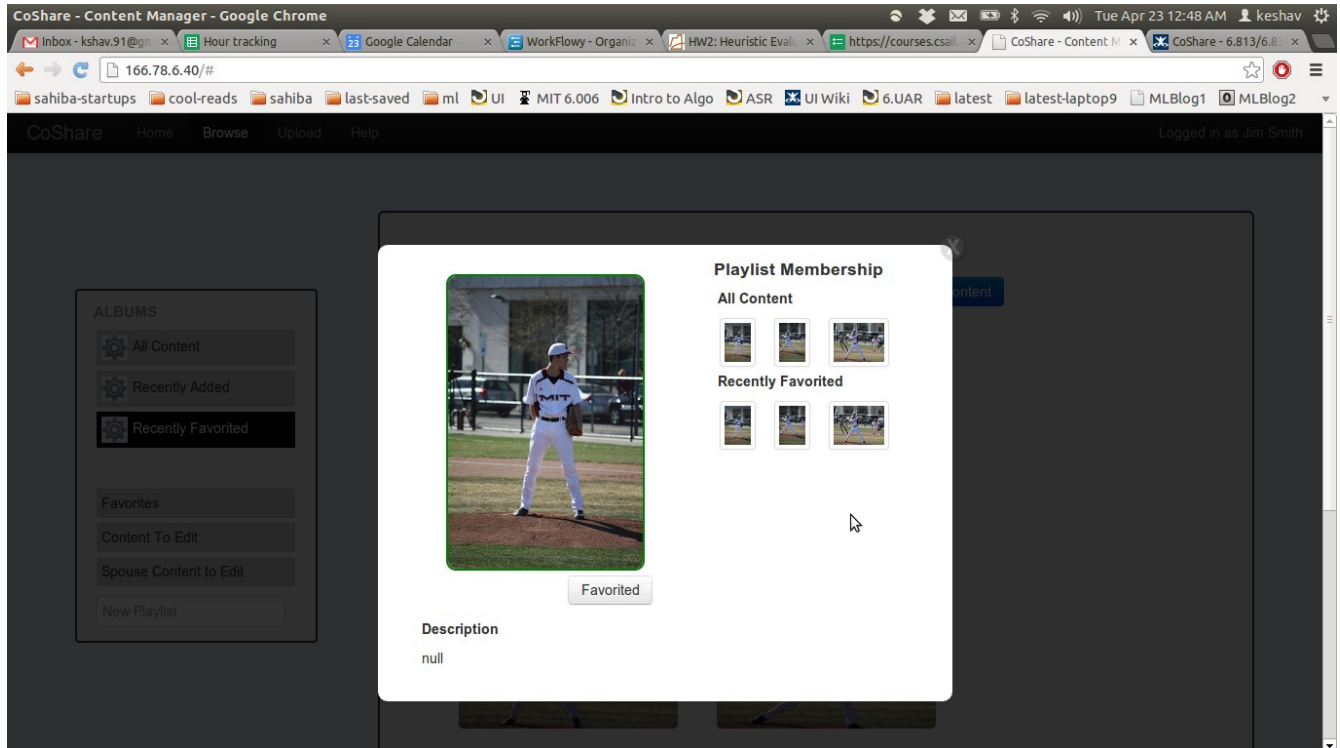

Title bar

12. Minor – Upload link does not work when on the home page.
13. Good – (picture below), **title bar is sticky**. Makes useful buttons more **accessible**.
14. Major – The same position is occupied by two different links depending on whether you are on the home page or the browse page. In the same page, it says "About". In the browse page, it says "Help". No other website I use changes the title bar.
15. Major – When the cursor is on the **Help** link, it does not get highlighted in white. Also, on hovering, the cursor has the affordance saying that this is selectable text, not link.
16. Good – Website name takes you to home page. **External consistency**.

Info box

16. Catastrophic – User needs to double click to see information. **Bad learnability.** I do not remember the last time I double clicked on anything on the web browser.

17. Major – Why take up more space by showing thumbnails from things within the playlists that this picture is a part of? Just name the playlists, and make them links.

18. Major – Favorited button behaves weirdly. Even when I look at pictures that are favorites, the "Favorited" button is not pressed.

Suggestions

19. Catastrophic - No log out button at all. Anywhere.
20. Minor – Allow closing pop-up by hitting escape key.
21. Major – Allow looking at favorited content of spouse. Or is the favorited property shared?
22. Major – Albums have a "**gear**" image on them. Gear is mostly only used for **Settings**.
