Known Issues

⚠️ When viewing a Powerpoint or Excel spreadsheet users are being prompted by Firefox to install an add-on. Why?
Answer

The add-on is required for a feature of this plugin that we **DO NOT** support. Firefox is just being helpful.

⚠️ **When going to Stellar from wikis in Safari browsers, users can encounter a certificate error.**

**Answer**

This can be fixed by clearing all Stellar-related cookies and restarting the browser.

See the [FAQ](#) for more answers.
