Autocomplete

Heading

- Autocomplete Examples
- Enabling and Disabling Autocomplete

When entering content into a Wiki page, typing a trigger character will display a menu that will allow you to auto-complete certain macros. Continuing to type after the trigger character will cause the autocomplete menu to close.

Autocomplete Examples

<table>
<thead>
<tr>
<th>Task</th>
<th>Trigger Character</th>
<th>Keyboard Shortcut</th>
<th>Description</th>
</tr>
</thead>
</table>

### Add a link on your page

| ![Link suggestions](image) | Ctrl+Shift+K | See a list of suggested pages or other locations to link to from your page. |

### Display an image, video, audio file or document on your page

| ![Media suggestions](image) | Ctrl+Shift+M | See a list of suggested images, multimedia files and documents to embed in your page. |

### Add a macro on your page

| ![Macro suggestions](image) | None | See a list of suggestions as you begin typing a macro name. |

### Notify another user by email that you have mentioned them on your page

| ![User suggestions](image) | None | See a list of suggested users to mention. |

### Enabling and Disabling Autocomplete

You can turn off the triggering of autocomplete by the `()` and `[]` characters. This will prevent the autocomplete from starting automatically when you press one of the trigger characters. You can also turn it back on again.

**Notes:**

- This setting does not affect the keyboard shortcuts for autocomplete (Ctrl+Shift+K and Ctrl+Shift+M). Even if the trigger characters are disabled, you can still use the keyboard shortcuts for autocomplete.
- This setting affects only you. Other people using Confluence can enable or disable the setting on their user profiles independently.
- Note that autocomplete is enabled by default.
To enable or disable the autocomplete trigger characters:

1. Choose your profile picture at top right of the screen, then choose Settings.
2. Choose Editor under “Your Settings” in the left-hand panel.
3. Choose Edit.
4. Either:
   - Disable autocompletion by selecting Disable Autocomplete.
   - Enable autocompletion by clearing Disable Autocomplete.
5. Choose Submit.
