Frequently Asked Questions

Q: Why can't I access my wiki?

Answer

- You may not be logged in.
- Directions for logging in via Touchstone https://wikis.mit.edu/confluence/display/HELP
  Wiki+Login+via+MIT+Touchstone
- You may not have the proper permissions to access the space:
- To access a wiki space, you must be a member of the wiki space group. Your Space Administrator may grant you
permissions to the space.

Q: How can I find out who my Space Admin is?
Q: How do I give an individual permission to my wiki space?
Answer
- You must be a Space Admin to grant space permissions. Please see https://wikis.mit.edu/confluence/display/HELP/User+and+Group+Administration

Q: How do I request a particular plug-in and/or macro?
Answer
- We evaluate requests on an ongoing basis. Please send your suggest/requests to wiki-support@mit.edu.

Q: How do I request a wiki?
Answer
- https://wikis.mit.edu/confluence/display/MITDASHBOARD/Wiki+Requests and click the "Request a Wiki Space" or "Request a Stellar Linked Wiki Space".

Q: I don't see my wiki on the dashboard?
Answer
- Same answer as for "I can't access my wiki", need to login.

Q: Using the Rich Text Editor, I am having trouble getting things to do what I want. For instance, when I try to move an item in a list and then promote it, it is not being promoted properly.
Answer
- The Rich Text Editor does not always behave. It is useful as a tool to try to do something you may not have done before and may not know how to do in wiki markup language. However, you may find that using the wikis markup will give you more control over how your page behaves.

Q: What if I mess something up while editing a page?
Answer
- Wikis makes it really easy to restore a previous version. Go into Tools, Page History. Select the version prior to your problematic edits and click on Restore this version.

Q: When viewing a powerpoint or excel spreadsheet I am being prompted by Firefox to install an add-on. Why?
Answer
- The add-on is required for a feature that we DO NOT support. Firefox is just being helpful.

Q: Some functionality of the Office Connector plugin is not available. Why is this?
Answer
- Certain features of the Office Connector like editing, modifying, and saving an office document from the wikis, requires the WebDAV plugin which is not compatible with our authentication software.
- The WebDAV plugin represents a security risk for our server and is therefore unavailable.
