Welcome!

The main question we try to answer on this page is:

statistical relationship between the features and the labels that can be represented by this data structure.

```python
import numpy as np
import matplotlib.pyplot as plt
from keras.models import Sequential
from keras.layers import Dense, Activation
from keras.optimizers import SGD

X = np.zeros([N, Dx])
Labels = np.zeros([N, Cy])  # neural network takes the indicators instead of Y

for i in range(N):
    X[i, :] = M[:, Y[i]]
    Labels[i, Y[i]] = 1

X = X + np.random.normal(0, .5, X.shape)
```
